New modified anaphylactic food allergen, useful for preventing or treating allergic reactions associated with e.g. anaphylactic allergens

Example 5; Page; 300pp; English.

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modified anaphylactic food allergen of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a conficient food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (3) a transgenic plant or animal expressing the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; and an isolated fragment of peanut allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergen; cand an isolated fragment of peanut allergen Ara h 1. The modified anaphylactic food allergen; useful for preventing or treating allergen; creating wounds in mammals such as bovine, canine, feline, caprine, crubber or preferably anaphylactic allergens. It is also useful for ovine, porcine, mutated to alter its IgE binding characteristics. Note: The present sequence is not shown in the specification but was created by the indexer using information provided in the specification

                                                                                                                                                                                   1909
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a modified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food

allergen; (3) a transgenic plant or animal expressing the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; and an isolated fragment of peanut allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergic reactions associated with any natural allergen such as food, insect, rubber or preferably anaphylactic allergens. It is also useful for treating wounds in mammals such as bovine, canine, feline, caprine, ovine, porcine, murine or equine species. The present sequence is a food allergen, and the specific allergen characteristics. Note: The present sequence is not shown in the specification but was created by the indexer using information provided in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              169

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cystable residue that has been modified so that it cannot participate in the disulphide bond. The modified anaphylactic food allergen; Also included are: (1) a method of making a modified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; and an isolated fragmen of peanut allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergen; creating wounds in mammals such as bovine, canine, feline, caprine, contine, mutine or equine species. The present sequence is a food allergen, mutated to aller specification but was created by the indexer using information provided in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Burks WA, Cockrell G;

                                                                                                                  ò
                                                                                                                                                                      8
                                                                                                                                                                                                                                                                                                                             The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural camino acid sequence that is substantially identical to that of natural canaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The condition may also comprise mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a condition as site specific mutation in the modified anaphylactic food allergen; (3) a transgenic plant or animal expressing the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; can an isolated fragment of peanut allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergen; creactions associated with any natural allergen such as food, insect, crubber or preferably anaphylactic allergens. It is also useful for treating wounds in mammals such as bovine, canine, feline, caprine, covine, mutine or equine species. The present sequence is a food allergen, mutated to allergens and present sequence is a food allergen, mutated to allergens. The specification but was created by the indexer using information provided in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           229

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been conditied so that it cannot participate in the disulphide bond. The modified so that it cannot participate in the disulphide bond. The conditied anaphylactic food allergen; (1) a method of making a reduce allergenicity. Also included are: (1) a method of making a conditied anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (3) a transgenic plant or animal expressing the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; or reducing the clinical response to a natural anaphylactic food allergen; and an isolated fragmen of peanut allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergen; reactions associated with any natural allergen such as food, insect, crubber or preferably anaphylactic allergens. It is also useful for treating wounds in mammals such as bovine, canine, feline, caprine, covine, porcine, mutine or equine species. The present sequence is not shown in the specification but was created by the indexer using information provided in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           treating allergic reactions associated with e.g. anaphylactic allergens

The invention relates to a novel antigen presentation enhancing hybrid polypeptide. The novel polypeptide has an N-terminal element consisting of 4-16 residues of a mammalian II-Rey peptide and its non-N-terminal deletion modifications, a chemical structure covalently linking the N-terminal element to an MHC class II-presented epitope of a C-terminal element. The C-terminal element comprises an antigenic epitope, which binds to an antigenic peptide binding site of an MHC class II molecule. The antigen presentation enhancing hybrid polypeptide has the following activities: antibacterial, virucide, fungicide, antirheumatic, antirheumatic, antirheumatic, antirheumatic, antirheumatic, and antiinflammatory, antidiabetic, and antithyroid. The antigen presentation enhancing hybrid polypeptide is useful for modulating the immune response Novel II-Key/antigen presentation enhancing hybrid polypeptide, useful for treating infections, rheumatoid arthritis, multiple sclerosis, lupus LeualaPheProGlySerGlyGluGlnValGluLysLeulleLysAsnGlnLysGluSer CACTITGIGACICCICCICCAAICICAAICICCAAICICCGICGICCICCICGAGAAGAG TTAGCATTCCCTGGGTCGGGTGAACAAGTTGAGAAGCTCATCAAAAACCAGAAGGAATCT TCTCCTGAGAAAGAGGATCAAGAGGAGGAAACCAAGGAGGGAAGGGTCCACTCTTTCA antigen presentation enhancing hybrid polypeptide; mammalian Ii-Key; MHC class II; antibacterial; virucide; fungicide; antirheumatic; antiarthritic; neuroprotective; dermatological; immunosuppressive; antiinflammatory; antidiabetic; antithyroid; immune; rheumatoid arthritis; multiple sclerosis; lupus erythematosus; diabetes mellitus; myasthenia gravis; autoimmune thyroiditis; scleroderma; dermatomyositis; pemphigus.

The modified so that it cannot participate in the disulphide bond. The modified anaphylactic mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a modified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; and an isolated fragment of peanut allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergic reactions associated with any natural allergen such as food, insect,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       rubber or preferably anaphylactic allergens. It is also useful for treating wounds in mammals such as bovine, canine, feline, caprine, owine, porcine, murine or equine species. The present sequence is a food allergen, mutated to alter its 1gB binding characteristics. Note: The present sequence is not shown in the specification but was created by the indexer using information provided in the specification

The invention relates to a modified anaphylactic food allergen has an anaphylactic deguence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a modified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; (7) a maphylactic food allergen; (8) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; anaphylactic food allergen is useful for preventing or treating allergen; anaphylactic food allergen is useful for preventing or treating allergic cod allergen is useful for preventing or preferably anaphylactic allergens such as food, insect, rubber or preferably anaphylactic allergens. The present sequence is a food ovine, porcine, murine or equine species. The present sequence is a food allergen, mutated to alter its IgE binding characteristics. Note: The present sequence is not shown in the specification but was created by the indexer using information provided in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    289
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              349

                                                                                                                                                                              þe
                                                                  This polypeptide comprises major peanut allergen Ara hi (AAW22149). Its sequence was deduced from cDNA clone P41b (AAT76613), isolated from peanut seed cDNA using a primer (see AAT76616) based on an isolated Ara hi peptide (see AAW24206). The sequence shows significant homology with the vicilin family of seed storage proteins of other legumes. The individuals with peanut hypersensitivity, Ara hi and Ara hii (see AAW24164) can be used to raise monoclonal antibodies which are used in specific two-site MAD ELISA for the detection of Ara hi (see AAW24164) can be used to raise monoclonal antibodies which are used in a specific two-site MAD ELISA for the detection of Ara hi or Ara hil (claimed). IgE- binding Ara hi antigen epitopes (see AAW24165-87) may be used in vaccines to protect against allergic reactions to peanut allergens, e.g. anaphylactic shock. (Updated on 17-OCT-2003 to

Sequence 2, Application US/10245227D

Patent No. 6936696

GENERAL INFORMATION:

APPLICANT: Monsanco Company

APPLICANT: Rapp, William D.

APPLICANT: Peng, Jexin

APPLICANT: Venkatesh, Tyamagondlu

TILE OF INVENTION: Enhanced Protein and Methods of Their Use

TILE REFERENCE: REN-00-087 US

CURRENT APPLICATION NUMBER: US/10/245,227D

CURRENT APPLICATION NUMBER: 2002-09-17

SOFTWARE: PATENTION OF SEQ ID NOS: 97

SOFTWARE: PATENTIAL OF SEQ ID NOS: 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |||||||
